

# Reviewing Flight History

PublicVue allows the public to view actual flight tracks to/from Phoenix Sky Harbor International Airport (PHX) as well as from other valley airports. You can view live flights as well as replay historical flights. Historical flight mode enables you to replay data from previous dates, beginning from the time you specify.

At the Home page, you will see four (4) links in the upper left corner of your screen. Click on 'Flight Tracking'

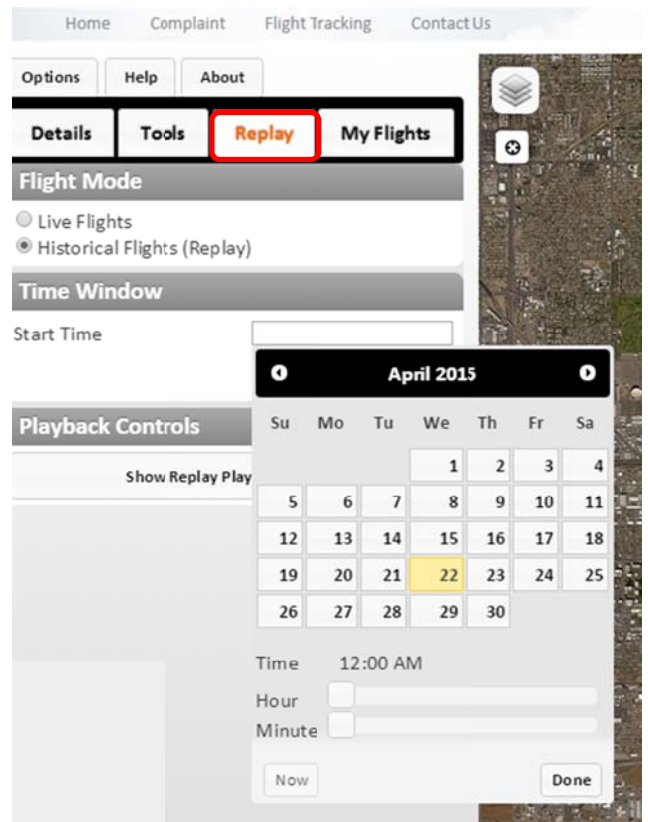

From the 'Flight Tracking' window, click on the **Replay** Tab.

Under Flight Mode, Click **Historical Flights (Replay)**

Click in the **Start Time** field. A calendar will appear. Specify the date by clicking it on the calendar, and use the *Hour* and *Minute* sliders to select the time of the event you would like to replay.

Click **Done** to close the calendar.

Click **Go**. The replay data is "saved up" and replayed on the map. *Please Note: Replay speed may vary due to system demand, internet connection speed and your own device/computer.*

Use the playback controls to rewind, forward, or to change the speed of the replay.
